

New Climate Normals Arrive May 4th!

Winter (DJF) Mean Temperature Change

Change in 30-yr average winter temperatures

Every 10 years the National Centers For Environmental Information (NCEI) re-calculates 30-year averages for temperatures, precipitation, and more to capture shifting climate trends and to use as a baseline for the rarity of upcoming weather.

The 1991-2020 averages will be released by NCEI on May 4th.
